United States Geological Survey Maryland-Delaware-District of Columbia Water Science Center

The United States Geological Survey was established on March 3, 1879. The Maryland-Delaware-District of Columbia Water Science Center moved into its current facility in the UMBC Research and Technology Park in August 2007.

The Maryland-Delaware-D.C. Water Science Center conducts hydrologic projects that address a wide variety of water-resources issues, including water supply, ground-water contamination, nutrient loading in streams, effects of land use on water quality, and basic hydrologic data collection. Scientists at this regional center are dedicated to long-term monitoring of the region's streams, rivers and aquifers to better understand the balance between nature and humans across the Chesapeake Bay watershed.

As an unbiased, multi-disciplinary science organization that focuses on biology, geography, geology, geospatial information, and water, the USGS is dedicated to the timely, relevant and impartial study of the landscape, our natural resources, and the natural hazards that threaten us. The USGS serves the nation by providing reliable scientific information to describe and understand the Earth; minimize loss of life and property from natural disasters; manage water, biological, energy, and mineral resources; and enhance and protect our quality of life.

Patuxent Research Refuge

Established in 1936 by executive order of President Franklin D. Roosevelt, the Patuxent Research Refuge is the Nation's only National Wildlife Refuge established to support wildlife research.

Patuxent Research Refuge is one of over 540 refuges in the National Wildlife Refuge System, the world's largest network of lands and waters dedicated to protecting wildlife and their habitat. With land surrounding the Patuxent and Little Patuxent Rivers between Washington, D.C. and Baltimore, the refuge has grown from the original 2,670 acres to its present size of 12,841 acres and encompasses land formerly managed by the Departments of Agriculture and Defense.

Throughout decades, Patuxent's mission has been to conserve and protect the nation's wildlife and habitat through research and wildlife management techniques. Patuxent Research Refuge is divided into three areas: 1) North Tract, which offers hunting, fishing, wildlife observation, trails, and many interpretive programs; 2) Central Tract, where the offices and study sites of the many research biologists are located at the United States Geological Survey Patuxent Wildlife Research Center; and 3) South Tract, where the National Wildlife Visitor Center and its trails are located. The National Wildlife Visitor Center and North Tract are the only areas open for visitor activities.
