**District Engineer:** Colonel Estee S. Pinchasin

**Command:** U.S. Army Corps of Engineers

**Branch:** U.S. Army

Employees: 1200

### History & Mission:

The Baltimore District of the U.S. Army Corps of Engineers provides environmental engineering solutions to the engineering challenges of their corporate customers. In total, the Baltimore District is composed of ten area offices—located throughout Maryland, Pennsylvania, Virginia, and West Virginia. Baltimore City houses the District's headquarters.

In the early 1800s, when coastal attacks became less of a concern, the Baltimore District's mission began. It was at this time that the nation became focused on developing road, rail, and canal systems; as well as communication networks. Today, employees of the Baltimore District provide a variety of expertise—such as design, construction, engineering, and environmental, to name a few.

These areas of expertise aid the Baltimore district in the following:

- Maintaining nearly 300 miles of federal channels;
- Overseeing approximately 150 miles of damage preventing federal flood protection levees;
- Managing reservoir projects;
- Running the Washington Aqueduct (supplying potable water to surrounding areas);
- Supporting local oyster habitats; and
- Protecting expanses of sensitive coastline.

The Baltimore District additionally oversees operations abroad, leases nearly 200 housing units, supports more than 300 Armed Forces recruiting stations, and works with several agencies outside of the DoD.
